

Samih Nal

Date of Birth: 23-10-1971

Address: Turkey

Phone Number: +95318309103

Email: samehn2000@gmail.com

My portfolio: <https://www.samehnaal.com/>

About me:

- Designing and creating plastic molds in general, with extensive experience in reverse engineering car parts and designing their molds.
- I possess skills in 3D laser scanning and creating parts from the scan data (STL) to the final product.
- I am proficient in using design software such as Solidworks and Geomagic DesignX.
- I am a professional CNC 3-axis operator using Autodesk Powermill.
- I have moderate experience in aluminum injection molds and sand casting.
- I understand the importance of precision and quality in the success and development of companies, as well as the significant damage that seemingly minor errors can cause, potentially leading to the loss of clients for the company.

History:

I started working with a group of partners in Syria in the field of design and implementation of plastic molds for 15 years through a small workshop we established for this purpose. After the war began in Syria, I moved to Turkey and worked for several years as a freelancer before establishing my own company in 2020-2024 **-Atom tasarim kalip sanyi ve tic LTD-** , which I am currently liquidating due to a lack of funding. Establishing the company in Turkey has given me a deep understanding of the challenges faced by business owners, which I expect will positively reflect on my performance for the company I will work for.

Education:

- **Degree:** Assistant Licentiate in Mechanical and Electrical Engineering
- **Specialization:** Aeronautics

Languages:

- Arabic (native)
- English (Intermediate)
- Turkish (intermediate)
